

Fort Wilderness Marine Biology **2018 Course Summary**

The Marine Biology Adventure offered through Fort Wilderness Ministries is a “hands-on” learning experience of the ocean environment. Students are transported to the Florida Keys for a 9-day, in-depth study of marine organisms, habitats, and environments, including a chance to swim with stingrays and much more. The participants are transported by coach bus to and from the Keys and once in Florida, lessons begin on the bus.

During their week in the Keys, participants will be working from textbooks specifically written for this course. All other instructional materials necessary will be provided. Participants are encouraged to complete and fill their lab books with as much information as possible from their learning. At the end of the weeklong experience, the participants will be evaluated with an exam, which will count 50% of their grade. The remaining 50% is devoted to participation in seminar attendance, oral reports and excursion attendance. At the completion of the course, a letter grade and a percentage grade will be issued and credit or transcript information can be applied to the schools if the participants desire this.
